
Guideline for the Organisation

1. Industrial Training Definition

Industrial training refers to the placement of a student at an external organisation for a minimum of **TWENTY (20)** weeks. It aims to elevate the students' knowledge and skills in a specific profession of their respective fields and simultaneously produce credible, creative and proficient graduates. It is also intended for the student to gain exposure to every aspect of career life - socially, culturally, interactions, and work.

2. Objectives of the Industrial Training

The industrial training is intended for the students to:

- i. Expose themselves to the surrounding conditions and circumstances related to the working environment to obtain basic professional skills (system development skills) within the allocated timeframe.
- ii. Train them to interact and communicate effectively at all levels in the workplace environment.
- iii. Expose themselves to new technologies.
- iv. Practice good ethical values and employment regulations.
- v. Develop and increase creativity by contributing critical ideas to the organisation.
- vi. Create affiliation with professionals outside the University.

3. Activities and Supervisions During the Industrial Training:

- i. The organisation must appoint an officer to be the organisation supervisor for the practical training student. At the end of the practical training session, the supervisor must complete the evaluation form and submit it to the faculty before/on the predetermined date.
- ii. During the training session, the organisation is expected to expose the students to various types of working experience suitable with the facilities available in the organisation.
- iii. Any agreement between the company and students should get consent from the faculty.

4. Practical Training Activities

Among the job scopes of the practical training include:

- i. System development, either in groups or individually, involves students in any phases, whether in the system analysis phase, system design, coding, system documentation, or system maintenance.
- ii. Exposure towards the use of software applications.
- iii. Exposure towards the installation and maintenance of computer hardware and repair.
- iv. Exposure towards installation and maintenance of computer network in the organisation.
- v. Involvement in activities conducted in the organisation.

5. Acknowledgement

The Faculty of Computing is grateful to your organisation for placing our students in your organisation to undergo their industrial training. We appreciate your willingness to collaborate to supervise, monitor, and assess the performance of our students. It is hoped that the cooperation between the faculty and the industry will be continued.
